Limitations. Using close-up filters is a great way to get started with macro-style photography, but they have some very important limitations that you need to be aware of to start. The photo above shows how it works. This technique works well if you have a lens with a manual aperture ring. Depth-of-field decreases as you get closer to your subject, and at the high magnifications obtained by reversing a 50mm lens, you need to stop down to increase the zone of sharpness. Macro photography (or photomacrography or macrography, and sometimes macrophotography), is extreme close-up photography, usually of very small subjects and living organisms like insects, in which the size of the subject in the photograph is greater than life size (though macrophotography technically refers to the art of making very large ...Close Up and Macro Photography Pollinator .
