At times, there are conflicting opinions regarding preoperative clearance. A few studies have documented that preoperative cardiac testing in patients with hip fracture delays surgery and increases costs without improving morbidity or mortality.Conclusions. Two thirds of patients with a past history of major osteoporotic fracture presenting with a new fracture were not treated. The main reason for lack of treatment seems to stem from the incorrect assessment of the patient's fracture risk., Medical Treatment In Patients With Osteoporotic Hip FractureOsteoporotik Kalca Kirikli Hastada Medi.
