

Download Solid-State Drive Caching In The IBM XIV Storage System

IBM Spectrum Storage. IBM Spectrum Storage portfolio can centrally manage more than 300 different storage devices and yottabytes of data. This device interoperability is the broadest in the industry – incorporating both IBM and non-IBM hardware and tape systems. ZFS is a combined file system and logical volume manager designed by Sun Microsystems. ZFS is scalable, and includes extensive protection against data corruption, support for high storage capacities, efficient data compression, integration of the concepts of filesystem and volume management, snapshots and copy-on-write clones, continuous ... Very good reference information. This information is useful for creating baseline sizing, but may not be accurate when taking into account the caching performed by an array, or an array that uses a non-standard RAID method.?????? ?????????????????? ???????????, ???????- ? ????????????????????? ??????????, ??? ? ..., Solid-State Drive Caching In The IBM XIV Storage System.
