In physics, aether theories (also known as ether theories) propose the existence of a medium, a space-filling substance or field, thought to be necessary as a transmission medium for the propagation of electromagnetic or gravitational forces. Luminiferous aether or ether ("luminiferous", meaning "light-bearing"), was the postulated medium for the propagation of light. It was invoked to explain the ability of the apparently wave-based light to propagate through empty space, something that waves should not be able to do. Der Äther (griech. [„aith'ər“], der (blaue) Himmel) ist eine hypothetische Substanz, die im ausgehenden 17. Jahrhundert als Medium für die Ausbreitung von Licht postuliert wurde. Where did everything come from? Where are we heading? Big History tells the story of the Universe starting from the Big Bang, the formation of stars, planets, life on Earth, modern civilization — and what might exist in the future., A History Of The Theories Of Aether And Electricity Part.
